<b>Title</b>	<b>: Hiding Secret Image in a Video</b>
--------------	---

**Description** : The Internet is always vulnerable to interception by unauthorized people over the world. The importance of reducing a chance of the information being detected during the transmission is being an issue now days. Some solution to overcome these issues is cryptography. Here we propose a data hiding and extraction procedure for AVI (Audio Video Interleave) videos embedding the secret message bits in DCT higher order coefficients. The secret information taken here is a grayscale image pixel values. The grayscale pixel values are converted to binary values and embedded those values in higher order coefficient value of DCT of AVI video frames. Data Hiding and Extraction procedure are experimented successfully. All experiments are done using Matlab 2010a simulation software.
